

JK Lakshmipat University, Jaipur
Institute of Management
END TERM EXAMINATION (December 2022)

Programme: BBA – Sem III
MM: 30 Marks

Course Code and Title: ID1102: Statistical Reasoning
Time: 2.5 Hours

Instructions: Attempt any five questions. All questions carry equal marks. Statistical Tables shall be provided on request.

1. a) Discuss the need and significance of computing measures of central tendency and dispersion for a given dataset? What additional insights can be drawn if we also know the shape of the distribution? LO1
b) Looking at the mean and standard deviation of two datasets, how would you conclude which dataset exhibits more variability? Explain.
c) Correlation does not imply causation. Do you agree or disagree? Justify your answer with suitable illustrations.
2. Amount of time needed by students to revise the course of Statistics before end semester examination is a normally distributed random variable with a mean of 25 hours and standard deviation of 5 hours. Find the probabilities that a student chosen at random will take following times to completely revise the course? Also sketch the corresponding normal curves. LO2
a. More than 25 hours
b. Less than 20 hours
c. Between 25 and 35 hours
d. Between 20 hours and 30 hours
3. For the following set of data, a) Plot the scatter diagram b) Develop the estimating equation that best describes the data c) Predict Y for X = 10, 15 LO2

X	13	16	14	11	17	9	13	17	18	12
Y	6.2	8.6	7.2	4.5	9.0	3.5	6.5	9.3	9.5	5.7

4. A manufacturer supplies axles that must be able to bear a stress of 80000 pounds per square inch (ppsi). Historical data indicates that the population standard deviation is 4000 ppsi. The manufacturer selects a sample of 100 axles and finds the stress capacity to be 79600 ppsi. Considering a significance level of 0.05, can we conclude that axles meet the stress requirements? Does your answer change if the significance level of 0.01 is used? LO2
5. President of a health insurance company is 99% confident that the length of hospitalization is dependent on the type of health insurance plan people have. A random sample of 660 hospitalization cases was collected and tabulated as under. LO2

Analyze the data using appropriate statistical method and comment upon the belief of the President.

		Days in Hospital		
		Less than 5 days	Between 5-10 days	More than 10 days
Insurance Coverage	Less than 25%	40	75	65
	Between 25%-50%	30	45	75
	More than 50%	40	100	190

6. A study ranked 11 of the world's major cities from 1 (worst) to 11 (best) on air quality index and incidents of pulmonary disease. LO2

City	A	B	C	D	E	F	G	H	I	J	K
Air-Quality Rank	4	7	9	1	2	10	3	5	6	8	11
Pulmonary disease Rank	5	4	7	3	1	11	2	10	8	6	9

Compute the rank correlation coefficient between the variables up to two decimal places and also comment upon the strength of the relationship.

-----X-----X-----X-----

STANDARD NORMAL TABLE (Z)

Entries in the table give the area under the curve between the mean and z standard deviations above the mean. For example, for $z = 1.25$ the area under the curve between the mean (0) and z is 0.3944.

z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
